

Seroma Set

Optimal solution for seroma aspiration

Seroma Set is a novel sterile single-use closed system for aspiration of seroma formation.

It simplifies emptying of fluid from a subdermal cavity in one uninterrupted process. Since it is a closed system it lowers the risk of bacterial contamination and makes the whole process more hygienic.

Being so easy to use it saves time and enables a more personal standard of care.

Easy-To-Use

- It requires no force - a gentle squeeze of the handle activates vacuum aspiration
- During this method stays one hand free
- Easily managed by one staff member

Safer Treatment

- Thanks to its closed system there is no contact with aspirated fluid by nurse or patient anytime during the procedure
- It lowers the risk of bacterial contamination and makes the whole procedure more hygienic
- Ergonomic handset is easy to control with less risk for accidental punctures

Patient-Friendly

- Faster aspiration shortens the time of treatment
- More complete aspiration increases general well-being of a patient
- No need for repeated skin punctures
- More patients can be aspirated in one day

Cost-Effective

- Seroma Set may reduce rate of infection
- Cut down number of aspirations
- Shorten time for aspiration
